

## Lab Experiment 3

1. Download the imdb movie dataset from the classroom.
2. Explore the structure of the dataset.
3. Find is there any null value in the dataset, Count the numbers of null values in each column.
4. Find out the total number of null values in the dataset.
5. Drop the null values and store the result in a new data set cleaned\_data, check how much data we lost during cleaning.
6. In the language column fill the missing values by “No info” value.
7. In the budget column fill the missing values by mean of the budget column.
8. Fill the missing value of the title\_year column with the last available value with limit of 3.
